

SUPERFORTE

“Superforte the best harmless cleaner”

Are some glass cleaners too aggressive to acid or is the vapour working too strong then is Superforte the solution. It has none of those characterizations and still is an excellent cleaner.

Superforte has got no harmful vaporizing and is biodegradable.

Superforte is a safe cleaner for obstinate pollution like moss, algae, rust, iron chloride, scale, calcium carbonate and manure. You can use Superforte on glass, aluminium, rubber and galvanised steel without it will corrode.

We do not recommend to use Superforte in a greenhouse with cultivation. The reason therefore is that the vaporizing will contact the plants and owing to this there can be combustion.

Using Superforte in a greenhouse

You can use Superforte for cleaning glass, posts and screens.

Directions for use

Normal pollution: 1 litre Superforte at 25 until 40 litres water.

Heavy polluted: 1 litre Superforte at 10 until 25 litres water.

Let it soak on the glass, posts or screens for 5 until 10 minutes then spray it off with a powerful water force.

Packaging units

5 / 10 / 30 litres.
